Napoli, 16-18 Aprile 2015

QUALE IMAGING SCELGO PER PRIMO NELLA SCA?

QUALE IMAGING SCELGO PER PRIMO NELLA SCA?

Goals

- Infarto progressivo/acuto
- Infarti di limitata estensione
- Reale estensione dell'infarto

Differentiation between myocardial infarction (MI) types 1 and 2 according to the condition of the coronary arteries.

Plaque rupture with thrombus

MI Type 1

Vasospasm or endothelial dysfunction

MI Type 2

Fixed atherosclerosis and supply-demand imbalance

MI Type 2

Supply-demand imbalance alone

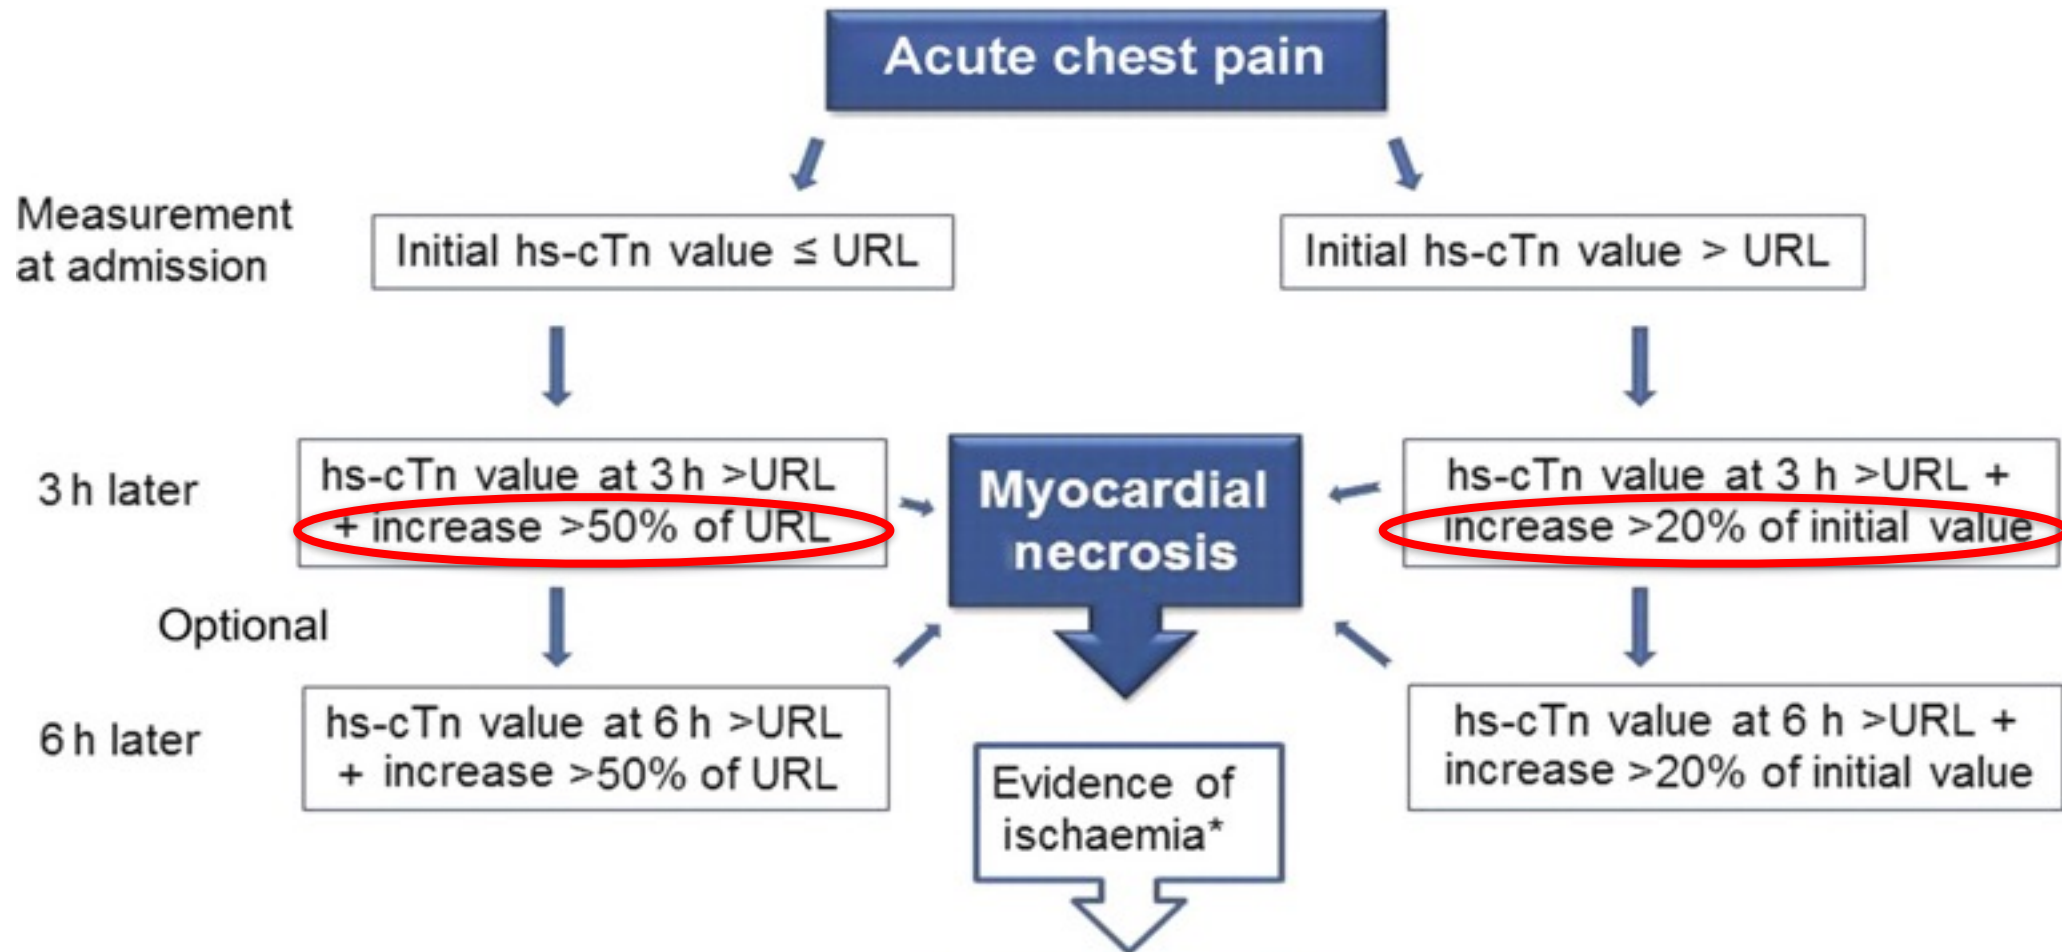

MI Type 2

Thygesen K et al. *Circulation*. 2012;126:2020-2035

How to use high-sensitivity cardiac troponins in acute cardiac care[†]

Kristian Thygesen*, Johannes Mair, Evangelos Giannitsis, Christian Mueller, Bertil Lindahl, Stefan Blankenberg, Kurt Huber, Mario Plebani, Luigi M. Biasucci, Marco Tubaro, Paul Collinson, Per Venge, Yonathan Hasin, Marcello Galvani, Wolfgang Koenig, Christian Hamm, Joseph S. Alpert, Hugo Katus, and Allan S. Jaffe, the Study Group on Biomarkers in Cardiology of the ESC Working Group on Acute Cardiac Care

L'ecografia da stress è ancora la vincente?

ESC Guidelines for the management of acute coronary syndromes in patients presenting without persistent ST-segment elevation

In patients with non-diagnostic 12-lead ECGs and negative cardiac biomarkers but suspected ACS, stress imaging may be performed, **provided the patient is free of chest pain.**

Various studies have used **stress echocardiography**, showing **high negative predictive values and/or excellent outcome in the presence of a normal stress echocardiogram.**

L'ecografia da stress è ancora la vincente?

ESC Guidelines for the management of acute coronary syndromes in patients presenting without persistent ST-segment elevation

Stress testing for ischaemia

In patients who continue to have typical ischaemic rest pain, no stress test should be performed.

However, **a stress test for inducible ischaemia has predictive value and is therefore useful before hospital discharge in patients with a non-diagnostic ECG provided there is no pain, no signs of heart failure, and normal biomarkers** (repeat testing).

L'ecografia da stress è ancora la vincente?

ESC Guidelines for the management of acute coronary syndromes in patients presenting without persistent ST-segment elevation

- **Early exercise testing** has a **high negative predictive value**
- Parameters reflecting **myocardial contractile performance** provide at least as much prognostic information as those reflecting **ischaemia**, while **the combination of these parameters gives the best prognostic information.**

L'ecografia da stress è ancora la vincente?

Table 12 Characteristics of tests commonly used to diagnose the presence of coronary artery disease

	Diagnosis of CAD	
	Sensitivity (%)	Specificity (%)
Exercise ECG ^{a,91,94,95}	45–50	85–90
Exercise stress echocardiography ⁹⁶	80–85	80–88
Exercise stress SPECT ^{96,99}	73–92	63–87
Dobutamine stress echocardiography ⁹⁶	79–83	82–86
Dobutamine stress MRI ^{b,100}	79–88	81–91
Vasodilator stress echocardiography ⁹⁶	72–79	92–95
Vasodilator stress SPECT ^{96,99}	90–91	75–84
Vasodilator stress MRI ^{b,98,100-102}	67–94	61–85
Coronary CTA ^{c,103-105}	95–99	64–83
Vasodilator stress PET ^{97,99,106}	81–97	74–91

Dipyridamole coronary flow reserve stratifies prognosis in acute coronary syndrome patients without left anterior descending disease

Luigi Ascione^{1*}, Guido Carlomagno², Chiara Sordelli³, Raffaele Iengo⁴, Vittorio Monda¹, Sergio Severino¹, Raffaele Merenda¹, Antonello D'Andrea³, and Pio Caso¹

- 152 patients with unstable angina, inferior or lateral STEMI
- free from LAD disease (LAD stenosis < 50% at coronary angiogram)
- patients with non-STEMI and subjects with apical wall motion abnormalities at rest not included
- High-dose dipyridamole stress echocardiography after they had been asymptomatic for at least 72 h.

Dipyridamole coronary flow reserve stratifies prognosis in acute coronary syndrome patients without left anterior descending disease

Luigi Ascione^{1*}, Guido Carlomagno², Chiara Sordelli³, Raffaele Iengo⁴, Vittorio Monda¹, Sergio Severino¹, Raffaele Merenda¹, Antonello D'Andrea³, and Pio Caso¹

Cost-Effectiveness of Coronary Computed Tomography and Cardiac Stress Imaging in the Emergency Department

A Decision Analytic Model Comparing Diagnostic Strategies for Chest Pain in Patients at Low Risk of Acute Coronary Syndromes

Virginia L. Priest, BS,* Paul A. Scuffham, PhD,* Rory Hachamovitch, MS, MD,‡
Thomas H. Marwick, MD, PhD†‡

In these models of a patient group at low risk of CAD and prevalence 2% to 30%, **CTA with confirmatory SPECT was cost saving** (lower costs, higher QALYs) **compared with a CTA-only strategy, stress ECG, Echo, and SPECT**. However, CTA may be associated with a **higher event rate in negative patients** than SPECT, and the diagnostic and prognostic information for the use of CTA in the emergency department is scarce and still emerging.

Stress CMR Reduces Revascularization, Hospital Readmission, and Recurrent Cardiac Testing in Intermediate-Risk Patients With Acute Chest Pain

Stress CMR Reduces Revascularization, Hospital Readmission, and Recurrent Cardiac Testing in Intermediate-Risk Patients With Acute Chest Pain

Chadwick D. Miller, MD, MS,* L. Douglas Case, PhD,† William C. Little, MD,‡
Simon A. Mahler, MD,*§ Gregory L. Burke, MD, MSc,|| Erin N. Harper, BS,*
Cedric Lefebvre, MD,* Brian Hiestand, MD, MPH,* James W. Hoekstra, MD,*
Craig A. Hamilton, PhD,¶ W. Gregory Hundley, MD‡#

In this single-center trial, management of intermediate-risk patients with possible ACS in an OU with stress CMR reduced coronary artery revascularization, hospital readmissions, and recurrent cardiac testing, without an increase in post discharge ACS at 90 days.
