WELCOME

The number of adults living with congenital heart disease (ACHD) continues to grow rapidly thanks to major advances in pediatric cardiology and cardiac surgery. As a result, ACHD has become a highly specialized field requiring lifelong multidisciplinary care and continuous updating in diagnostics, interventions, heart failure management, arrhythmias, reproductive health, and patient education.

The Joint International Congress in Adult Congenital Heart Disease, combining the 15th International Monaldi ACHD Symposium and the 4th ACHD Academy Update, aims to provide an international forum for education, scientific exchange, and collaboration among healthcare professionals involved in ACHD care.

The program has been designed to address current challenges and future perspectives in ACHD through a practical and multidisciplinary approach, with dedicated sessions on advanced imaging, innovative interventions, transition and education programs, heart failure, pregnancy and reproductive care, and emerging technologies including remote monitoring and wearable devices.

By bringing together internationally recognized experts and young professionals, the meeting seeks to promote best clinical practice, encourage collaborative research, and improve lifelong care and outcomes for ACHD patients worldwide.
